A magnetic cosmetics tray has a tray portion. The tray portion has a magnetic tray base defined by and circumscribed by a tray sidewall. The tray sidewall includes a sidewall upper and a sidewall lower. The tray sidewall further includes a sidewall shoulder defined at a junction between the sidewall upper and the sidewall lower. The sidewall shoulder is defined on the sidewall inside surface. The magnetic tray base has a magnetic layer. Cosmetic modules reconfigurably attach to the magnetic tray base. A lid has a mirror side and a stand side. The stand side includes a stand that pivots from a stowed position to a deployed position. The mirror side includes a mirror with a mirror edge. The mirror edge engages to the sidewall shoulder when the lid is engaged to the tray position.
